

Press release, publication-free 17.12.2021

An innovative new EV charging app to make life easier for electric vehicle users

Digitouch Group Oy's professional team has developed a universal **Charzzy® charging** application based on the needs of electric vehicle (EV) users. Currently, the growing number of EV service providers have their own registration and charging process along with a dedicated key, token, card, code, or other identifier. Charzzy simplifies these processes and transactions regardless of operator and charging points.

The app is based on the knowledge and in-depth expertise of its designers in EV charging services. It is easy to use and free to download for both Android and iOS devices from Google Play and the Apple Store. It enables an EV user to access up to 250,000 charging points across Europe. By the end of 2022, the goal is to increase this number to more than 500,000 to provide Europe's largest charging point network.

The Smartphone installed Charzzy-app shows charging point ID locations of all EV stations. Charzzy's user benefits are ease of use, an extensive and expanding network of charging points and being able to see charging costs in advance. Each transaction is handled via the Charzzy-payment service by means of a payment card. Other payment methods will be added by countries and regions.

Digitouch Group Oy is a Finnish company which develops and operates customer services and solutions. The company has been identified as a Reliable Partner in Finland and has a strong AA credit rating. The company is 100% Finnish-owned and our aim is to grow strong internationalization for the Charzzy solution and for the company's other key products and services.
